

CIRCULATION UNIT

DIRECT SUPPLY, SERIES GDxX00

GDA311

GDA211

GDA212

GDF111

PRODUCT DESCRIPTION

The direct groups are used for the direct energy distribution in the heating systems, which means that the heating water is delivered to the heating receiver with the same temperature that leaves the heating source. The groups are used in the systems where the heating source is controlling the heating water temperature e.g. through a weather compensated control - in this case no additional mixing / heating water control is needed. The groups can also be used if the heating water needs to be "transported" to an accumulation tank, or for heating water distribution in bigger systems (so called central distribution pump groups). Another application area for the direct group is for potable water heating in combination with potable water tank equipped with heating coil or tank in tank solutions.

The units are equipped with two shut-off valves with colour coded thermometers, one shut-off valve placed directly under the pump and one check valve placed under the return from the heating circuit and insulation shell.

When designing the circulation unit product line ESBE focused on performance, user friendly usage, environment and design. This applies to everything from manufacturing, material and packaging.

VERSIONS

ESBE direct supply circulation units are available in three different version; standard design with and without pump, and a compact design for areas where space is limited .

SERIES GDA200

The ESBE Series GDA200 is a direct supply circulation unit equipped with a pump. The series comes in two sizes, DN25 and DN32 and with the ability to choose pump, Wilo or Grundfos. The pumps can be set to constant speed, variable pressure or constant pressure. The Grundfos pumps come with AutoADAPT feature which adjust the available pump pressure and the flow to the current system requirements.

The compact design of the unit has been thought through, focus put on chosen components such a pump resulted in high performance of the circulation unit.

SERIES GDA300

The ESBE Series GDA300 is a compact but powerful direct supply circulation unit designed for applications where space matters, however there is no room for compromises. The GDA300 is a DN20 circulation unit with performance equals the corresponding DN25 groups. This is possible by adjusting the pump curves and consider the pressure losses in the group. By putting focus on performance, we achieved the smallest circulation unit with unique pump curves which are covering low and high demands.

The GDA300 is equipped with Wilo pump which can be set to variable pressure, constant pressure, and iPWM1/2.

SERIES GDF100

The ESBE Series GDF100 is a direct supply circulation unit, available in size DN25, designed to be used with almost any 180mm pump available on the market. The group is equipped with an insulation shell which can be adjusted according to the pump design, even if the pump is delivered with its own insulation. ESBE have put a lot of effort to make the adjustment process easy and clear, and to make the result of product adjustment look like factory assembled.

SERVICE AND MAINTENANCE

The circulation unit does not require any specific maintenance under normal conditions.

KEY BENEFITS

- High class insulation of hydronic parts
- Compact design
- Pre tested and ready to use
- Ready for 180mm pumps - applies to GDF100
- Adjustable insulation shell - applies to GDF100
- Symmetric design for left/right pump placement
- Designed to last and perform
- High-end product finish

RELATED ACCESSORIES

ESBE Manifold

Manifolds for Series GDF100 and GDA200. See separate data sheet for further detailed information.

Manifolds for 1, 2, or 3 circulation units with integrated hydraulic separation.

Art. No.	
66001100	GMA411 - for 1 unit
66001600	GMA521 - for 2 units
66001700	GMA531 - for 3 units

Manifold for 2, 3, 4 or 5 circulation units without integrated hydraulic separation function.

Art. No.	
66001200	GMA421 - for 2 units
66001300	GMA431 - for 3 units
66001400	GMA441 - for 4 units
66001500	GMA451 - for 5 units

Manifold for Series GDA300 without integrated hydraulic separation function. See separate data sheet for further detailed information.

Art. No.	
66000500	GMA321 - for 2 units
66000600	GMA331 - for 3 units

TECHNICAL DATA

 Visit esbe.eu for further detailed information.

The Circulation unit, in general

Pressure class: _____ PN 10
 Working pressure: _____ 1,0 MPa (10 bar)
 Connections, _____ Internal thread (G), ISO 228/1
 _____ External thread (G), ISO 228/1
 Insulation: _____ EPP λ 0,036 W/mK

Media: _____ Heating water (in accordance with VDI2035)
 _____ Water / Glycol mixtures, max. 50%.
 Water / glycol mixtures are affecting the pump performance. In case of Applications where water / glycol mixtures are used, pump performance should be considered.

Series GDA211

Media temperature: _____ max. +100°C
 _____ min. +5°C
 Ambient temperature: _____ max. +58°C
 _____ min. 0°C
 Pump type, DN25: _____ Wilo PARA 25-130/6-43/SC
 DN32: _____ Wilo PARA 25-130/8-75/SC
 Power supply: _____ 230 \pm 10% V AC, 50/60 Hz
 Power consumption - Wilo PARA 25/6: _____ 3-43 W
 - Wilo PARA 25/8 _____ 10-75 W
 Enclosure rating: _____ IP X4D
 Insulation class: _____ F

EI (Energy Efficiency Index) - Wilo PARA 25/6: _____ <0,20
 - Wilo PARA 25/8: _____ <0,21

Material, in contact with water

Components: _____ Brass, Cast iron, Steel
 Sealing material: _____ PTFE, Aramid fibre, EPDM

Conformities and certificates

 LVD 2014/35/EU  ErP 2015   EnEV 2014
 EMC 2014/30/EU
 RoHS3 2015/863/EU  EnEV 2014

CIRCULATION UNIT

DIRECT SUPPLY, SERIES GDxX00

DIMENSIONING, PUMP CAPACITY DIAGRAM

Example: Start with the heat demand of the heating circuit (e.g. 25 kW) and move horizontally to the right in the diagram to the $\Delta t = 15^\circ\text{C}$ (temperature difference between flow and return of the heating circuit). Next go up and find the possible duty points.

Setting I gives duty point A with a residual head of 40 kPa for DN32. Setting II and III gives duty point B with a residual head of 50 kPa for DN32.

SERIES GDA211 – Constant differential pressure, Wilo pump

SERIES GDA211 – Variable differential pressure, Wilo pump

SERIES GDA211 – Constant speed, Wilo pump

CIRCULATION UNIT

DIRECT SUPPLY, SERIES GDxX00

DIMENSIONING, PUMP CAPACITY DIAGRAM

Example: Start with the heat demand of the heating circuit (e.g. 30 kW) and move horizontally to the right in the diagram to the $\Delta t = 15^\circ\text{C}$ (temperature difference between flow and return of the heating circuit). Next go up and find the possible duty points.

Setting I gives duty point A with a residual head of 16 kPa for DN32. Setting II and III gives duty point B with a residual head of 28 kPa for DN32.

SERIES GDA212 – Constant differential pressure, Grundfos pump

SERIES GDA212 – Variable differential pressure, Grundfos pump

SERIES GDA212 – Constant speed, Grundfos pump

CIRCULATION UNIT

DIRECT SUPPLY, SERIES GDxX00

DIMENSIONING, PUMP CAPACITY DIAGRAM

Example: Start with the heat demand of the heating circuit (e.g. 25 kW) and move horizontally to the right in the diagram to the chosen Δt , which is the temperature difference between flow and return of the heating circuit (e.g. 15°C). Next go up and find the possible duty points.

Setting I gives duty point A with a residual head of 18 kPa. Setting II and III gives duty point B with a residual head of 27 kPa.

SERIES GDA311 – Constant differential pressure, Wilo pump

SERIES GDA311 – Variable differential pressure, Wilo pump

SERIES GDA311 – Ext iPWM 1/ iPWM 2, Wilo pump

CIRCULATION UNIT

DIRECT SUPPLY, SERIES GDxX00

INSTALLATION EXAMPLES

①

The application shows central heat distribution from an accumulation tank (so called central pump) across the whole building to different zones, for example to each floor level. The main function of the direct group (GDx) is to supply the heating water with unchanged flow temperature to the other circulation units with mixing function. In this example the GDx is used in bigger heating installation where additional central supply pump is needed to overcome the system pressure losses.

②

The application shows a central heat distribution with boiler and potable water preparation, for example a boiler room. The system is divided into zones, for example in different buildings or floors. The main function of the direct group (GDx) is to supply the heating water with unchanged flow temperature to the heat receiver, such as a potable water tank, radiators or to the other circulation units with mixing function.

*The shown applications are only examples of product use!
Before using the product in any application, the regional and national regulations need to be checked.*
